IMMERSIVE BIOLUMINESCENT TANK

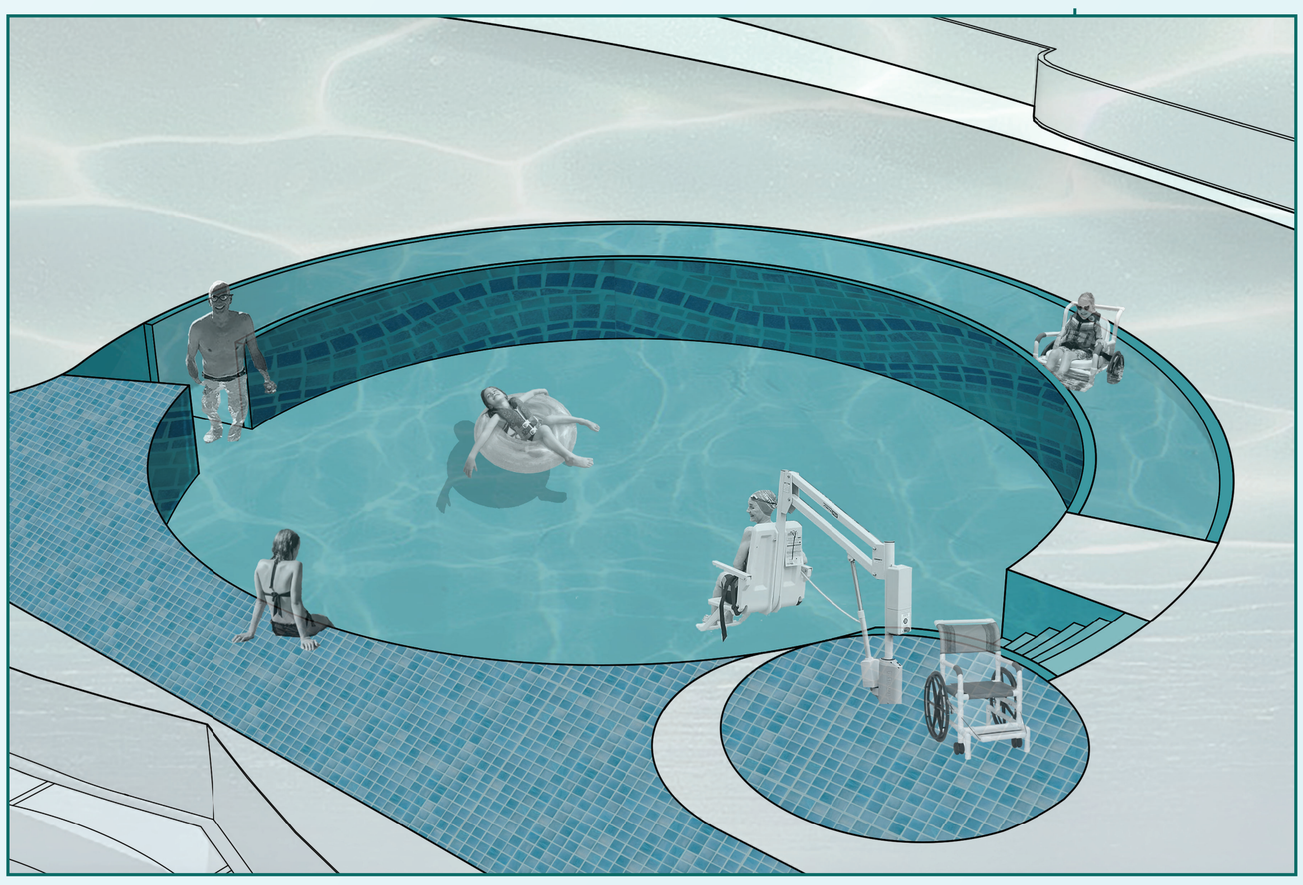

INTERIOR RAMP EXPERIENCE

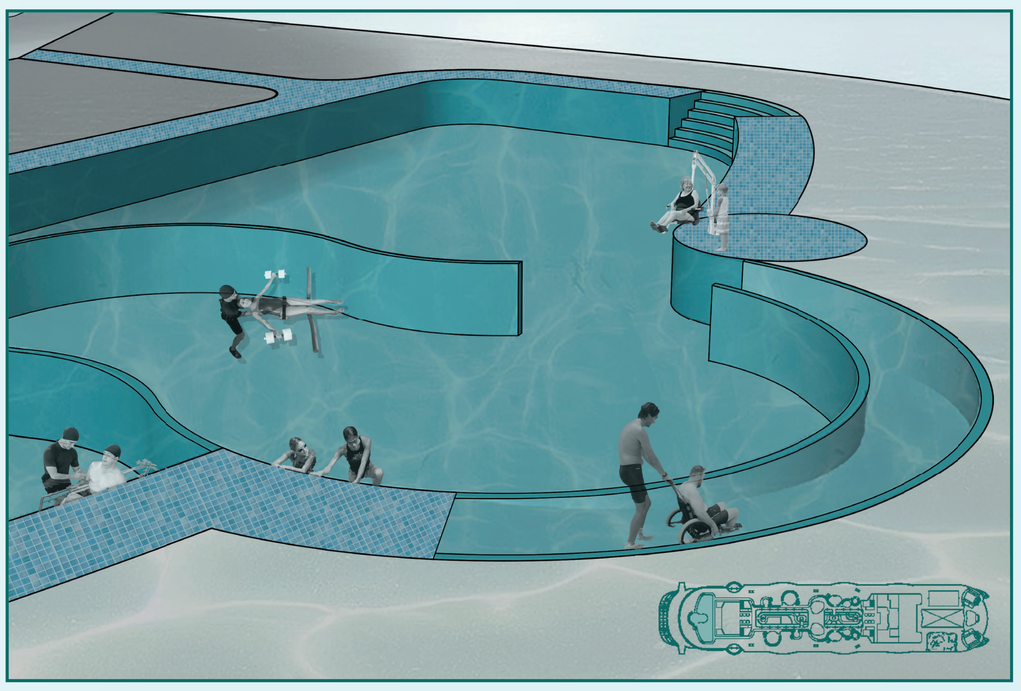

The approach to universal design on the Allure Waterways ship creates a series of continuous paths both vertically and horizontally throughout the boat. These physical and figurative waterways immerse the user in the healing quality of water at all times.

Obstacles to mobility impairment in typical design make entering and exiting the water inherently challenging due to changes in ground level and physical barriers such as furniture. The system of sloped “river” paths that connect the ship’s pools allows the user to transition into and navigate across the deck seamlessly. The bioluminescent tank provides access from the ground deck up to the water-related programs using a gradual ramp.

The ship’s design follows the form of natural water features such as rivers and pools to emulate a relaxing cruise experience while the bioluminescent tank brings light down into the core of the ship for a playful dynamic.
